# The Final Piece to Your Unified Communications Puzzle

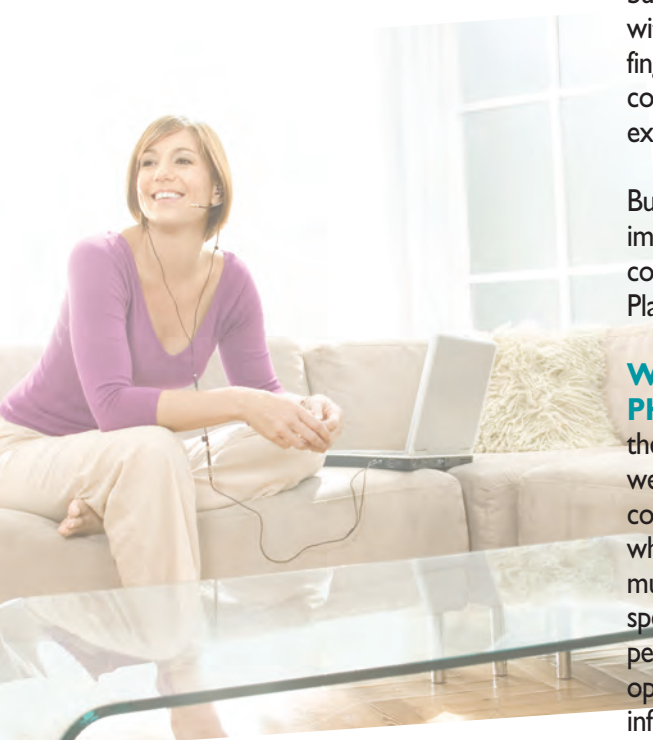

**It's the buzz word ringing in your ears and getting louder every day—but what is Unified Communications?**

**Unified Communications (UC) is a collection of communications tools that function as a single component. You may already use some of these tools: VoIP, SecureIM, Conference Bridging, Desktop Sharing, E-Fax and Video Conferencing.**

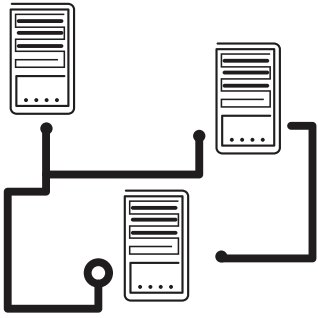

**THE ADVANTAGE OF UNIFIED COMMUNICATIONS IS ITS ABILITY TO CONSOLIDATE THESE TOOLS** by using technology to make them all easier to access. The ability to do so has become increasingly important as the definition of an office environment has changed to encompass everything from a corner cubicle to a coffee shop with a Wi-Fi connection. Companies, including both large corporations and small privately owned businesses, that were previously unable to support separate UC functionalities with their existing communications solution can now keep communication at their fingertips, regardless of where their business takes them. By supporting the communication between the office, home and even the travel in-between, UC has expanded the breadth of business efficiency and opportunity.

But while UC is the proponent of this new-generation business model, the most important feature is often overlooked. What Sencommunications® and Plantronics® consider the final piece of the Unified Communications puzzle is the perfect fit of a Plantronics® headset, telephone or personal speakerphone.

**WHY IS THE PERFECT HEADSET, TELEPHONE OR SPEAKERPHONE SO IMPORTANT TO THE UC EXPERIENCE?** Consider this: the decision to implement a Unified Communications solution is often heavily weighed due to the significant financial investment that is involved. Once you've committed those valuable resources toward the betterment of your organization, why let just any piece of telecom equipment determine the quality of your communications connection? Out of every UC component, a headset, telephone or speakerphone is the piece of equipment that you have the most contact with. It's a personal extension of how you fit within your business because your day-to-day operations depend on clear, efficient communication. Your performance directly influences that of your business. Only a UC product specifically suited to your office environment and optimized to match your UC applications can enhance your performance.
